## 1. Introduction

European Environmental Monitoring and Consultancy (EEMC) Limited were appointed by Deconstruct UK Ltd to review and report on baseline dust (PM<sub>10</sub>) monitoring for the 247 Tottenham Court Road project.

The 247 Tottenham Court Road project is in the London Borough of Camden (LBC). The site is bounded by roads on three sides and shares a party wall with 248 Tottenham Court Road on the fourth side, to the south. Tottenham Court Road lies to the west of site, with Bayley Street to the north and Morwell Street to the east.

Baseline dust monitoring was carried out by Site Engineering Surveys (SES) from May 2021. This report presents the measured and recorded unattended baseline air quality monitoring data gathered by SES from 03 September 2021 to 30 November 2021., following the monitors being updated to MCERTS approved monitors and being relocated so they were at least 1m from the façade in line with Camden’s Planning Guidance (CPG) on Air Quality.

For summary of works and dust mitigation measures refer to the projects Air Quality and Dust Management Plan: *EEMC-AQDMP001-206 Rev00 - 247 Tottenham Court Road Air Quality Dust Management Plan.*

## 2. Context

Camden’s Planning Guidance (CPG) on Air Quality, January 2021, is a Supplementary Planning Document to the Local Plan. The CPG provides information on key air quality issues within the borough and supports Local Plan Policy CC4 Air quality. The CPG document states: *“We may require monitoring, before and during the construction and demolition phases, dependent upon the scale of the proposed development. Medium risk schemes usually require a minimum of two real-time monitors, while high risk schemes usually require four. The choice of locations and positions must clearly be demonstrated on the basis of identified nearby receptors, the prevailing atmospheric conditions, off-site emission sources, local topography, and the relevant dust-generating site activities. Baseline monitoring would normally be required for at least 6 months (ideally 12 months) prior to commencement, and the results used to inform interpretation of construction phase monitoring and any actions required to be taken to avoid exceedances.”*

An Air Quality Assessment (AQA) for the project was carried out in the Air Quality and Dust Management Plan for this Project (*EEMC-AQDMP001-206 Rev00 - 247 Tottenham Court Road Air Quality Dust Management Plan*), and the summary of Impact Risks determined in that assessment is set out below:

| Phase        | Risk         |              |
|--------------|--------------|--------------|
|              | Dust Soiling | Human Health |
| Demolition   | High         | Medium       |
| Earthworks   | Low          | Negligible   |
| Construction | Medium       | Low          |
| Trackout     | Medium       | Low          |

**Table 1 – Summary of unmitigated dust risk categories for each project phase, from the AQA**

The AQA also provided the following summary: *“Overall, the development is considered to be High Risk for nuisance dust soiling effects and Medium Risk for PM<sub>10</sub> health effects, in the absence of mitigation.”*

Guidance is set out in the IAQM “Guidance on Air Quality Monitoring in the Vicinity of Demolition and Construction Sites” 2012 document, and the Mayor of London, Supplementary Planning Guidance “The Control of Dust and Emissions During Construction and Demolition SPG” published in July 2014. For High Risk sites the SPG noted monitoring requirements as follows: *“a minimum of two automatic particulate monitors to measure PM<sub>10</sub> level at*

either end of the transect” are required and that “it will normally be necessary to undertake baseline monitoring for a minimum period of three months”.

Deconstruct UK Ltd will carry out their site operations in compliance with the applicable guidance and where possible implementing the mitigation measures outlined in the AQA.

The proposed PM<sub>10</sub> trigger and action levels for PM<sub>10</sub> concentrations in 15-minute and 1-hour mean periods during the works are set out below and are based on the Mayor of London SPG and IAQM guidance mentioned above.

- Trigger Level: 150 micrograms/m<sup>3</sup> (190µg/m<sup>3</sup>) as a 15-minute mean;
- Action Level: 250 micrograms/m<sup>3</sup> (250µg/m<sup>3</sup>) as a 15-minute mean;
- Action Level: 190 micrograms/m<sup>3</sup> (190µg/m<sup>3</sup>) as a 1-hour mean.

Site operations are limited to 08:00-18:00 hours Monday to Friday and 08:00-13:00 on Saturdays.

### 3. Instrumentation

Three (3) Aeroqual Dust Sentry monitors were originally installed in May 2021 and were replaced with Three (3) Aeroqual Dust Profiler (MCERTS approved) monitoring units by SES on 26<sup>th</sup> August 2021. The Dust Profilers were repositioned on 3<sup>rd</sup> September 2021 to ensure they were at least 1m from the façade. This report outlines the baseline period from 03 September 2021 to 30 November 2021 following MCERTs approved monitors being installed and the monitors being repositioned to ensure compliance with Camden’s monitoring requirements. Monitoring locations are shown as DMP1, DMP3 and DMP4 in Figure 1. A fourth MCERTs approved monitoring unit, a Turnkey Osiris, was installed at monitoring position DMP2 on 23<sup>rd</sup> September 2021.

A map showing the monitoring positions is provided as Figure 1 and photographs of the monitoring equipment are provided in Images 1-8.

A copy of the MCERTs certification for the installed monitors are attached as Appendix 1. EEMC have assumed all monitors have current and valid calibration certificates, and that certificates would be provided upon request.

### 4. Measurement Results

The results of the Dust (PM<sub>10</sub>) measurements in this period are presented as graphs in section 5.0.

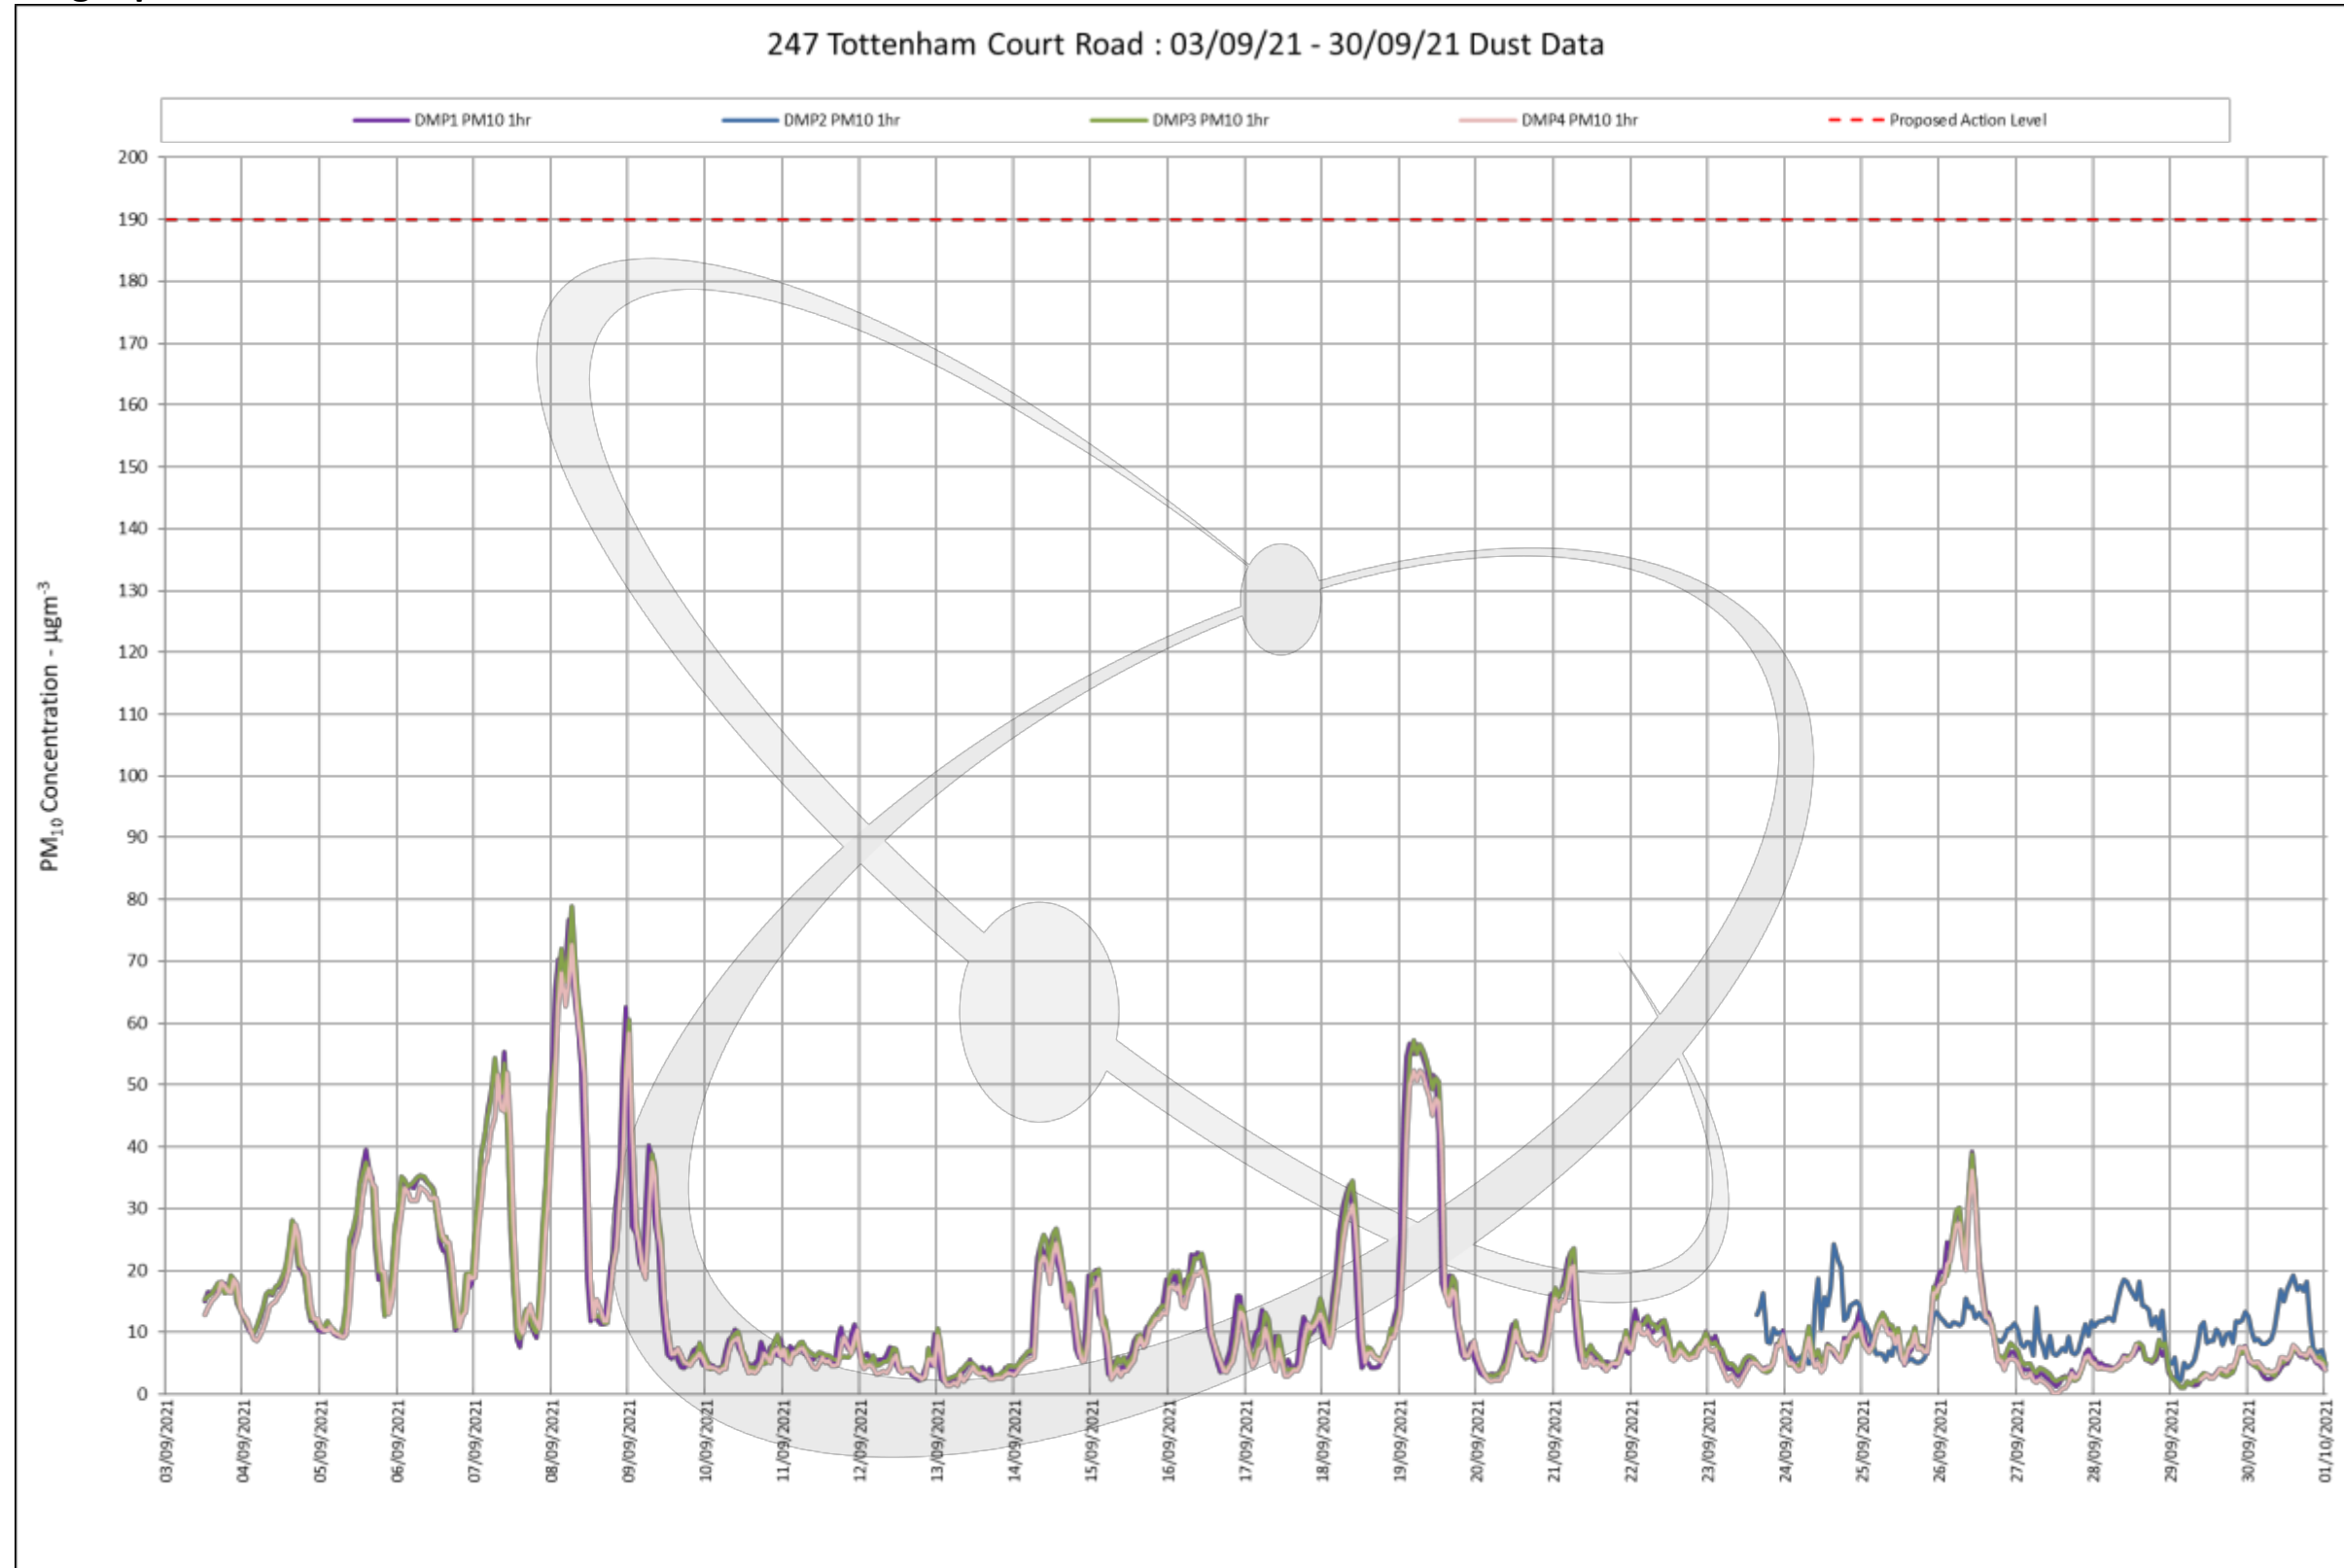

A summary of the 24-hour mean average data is provided in section 6.0 and a discussion of the measured data is provided in section 7.0.

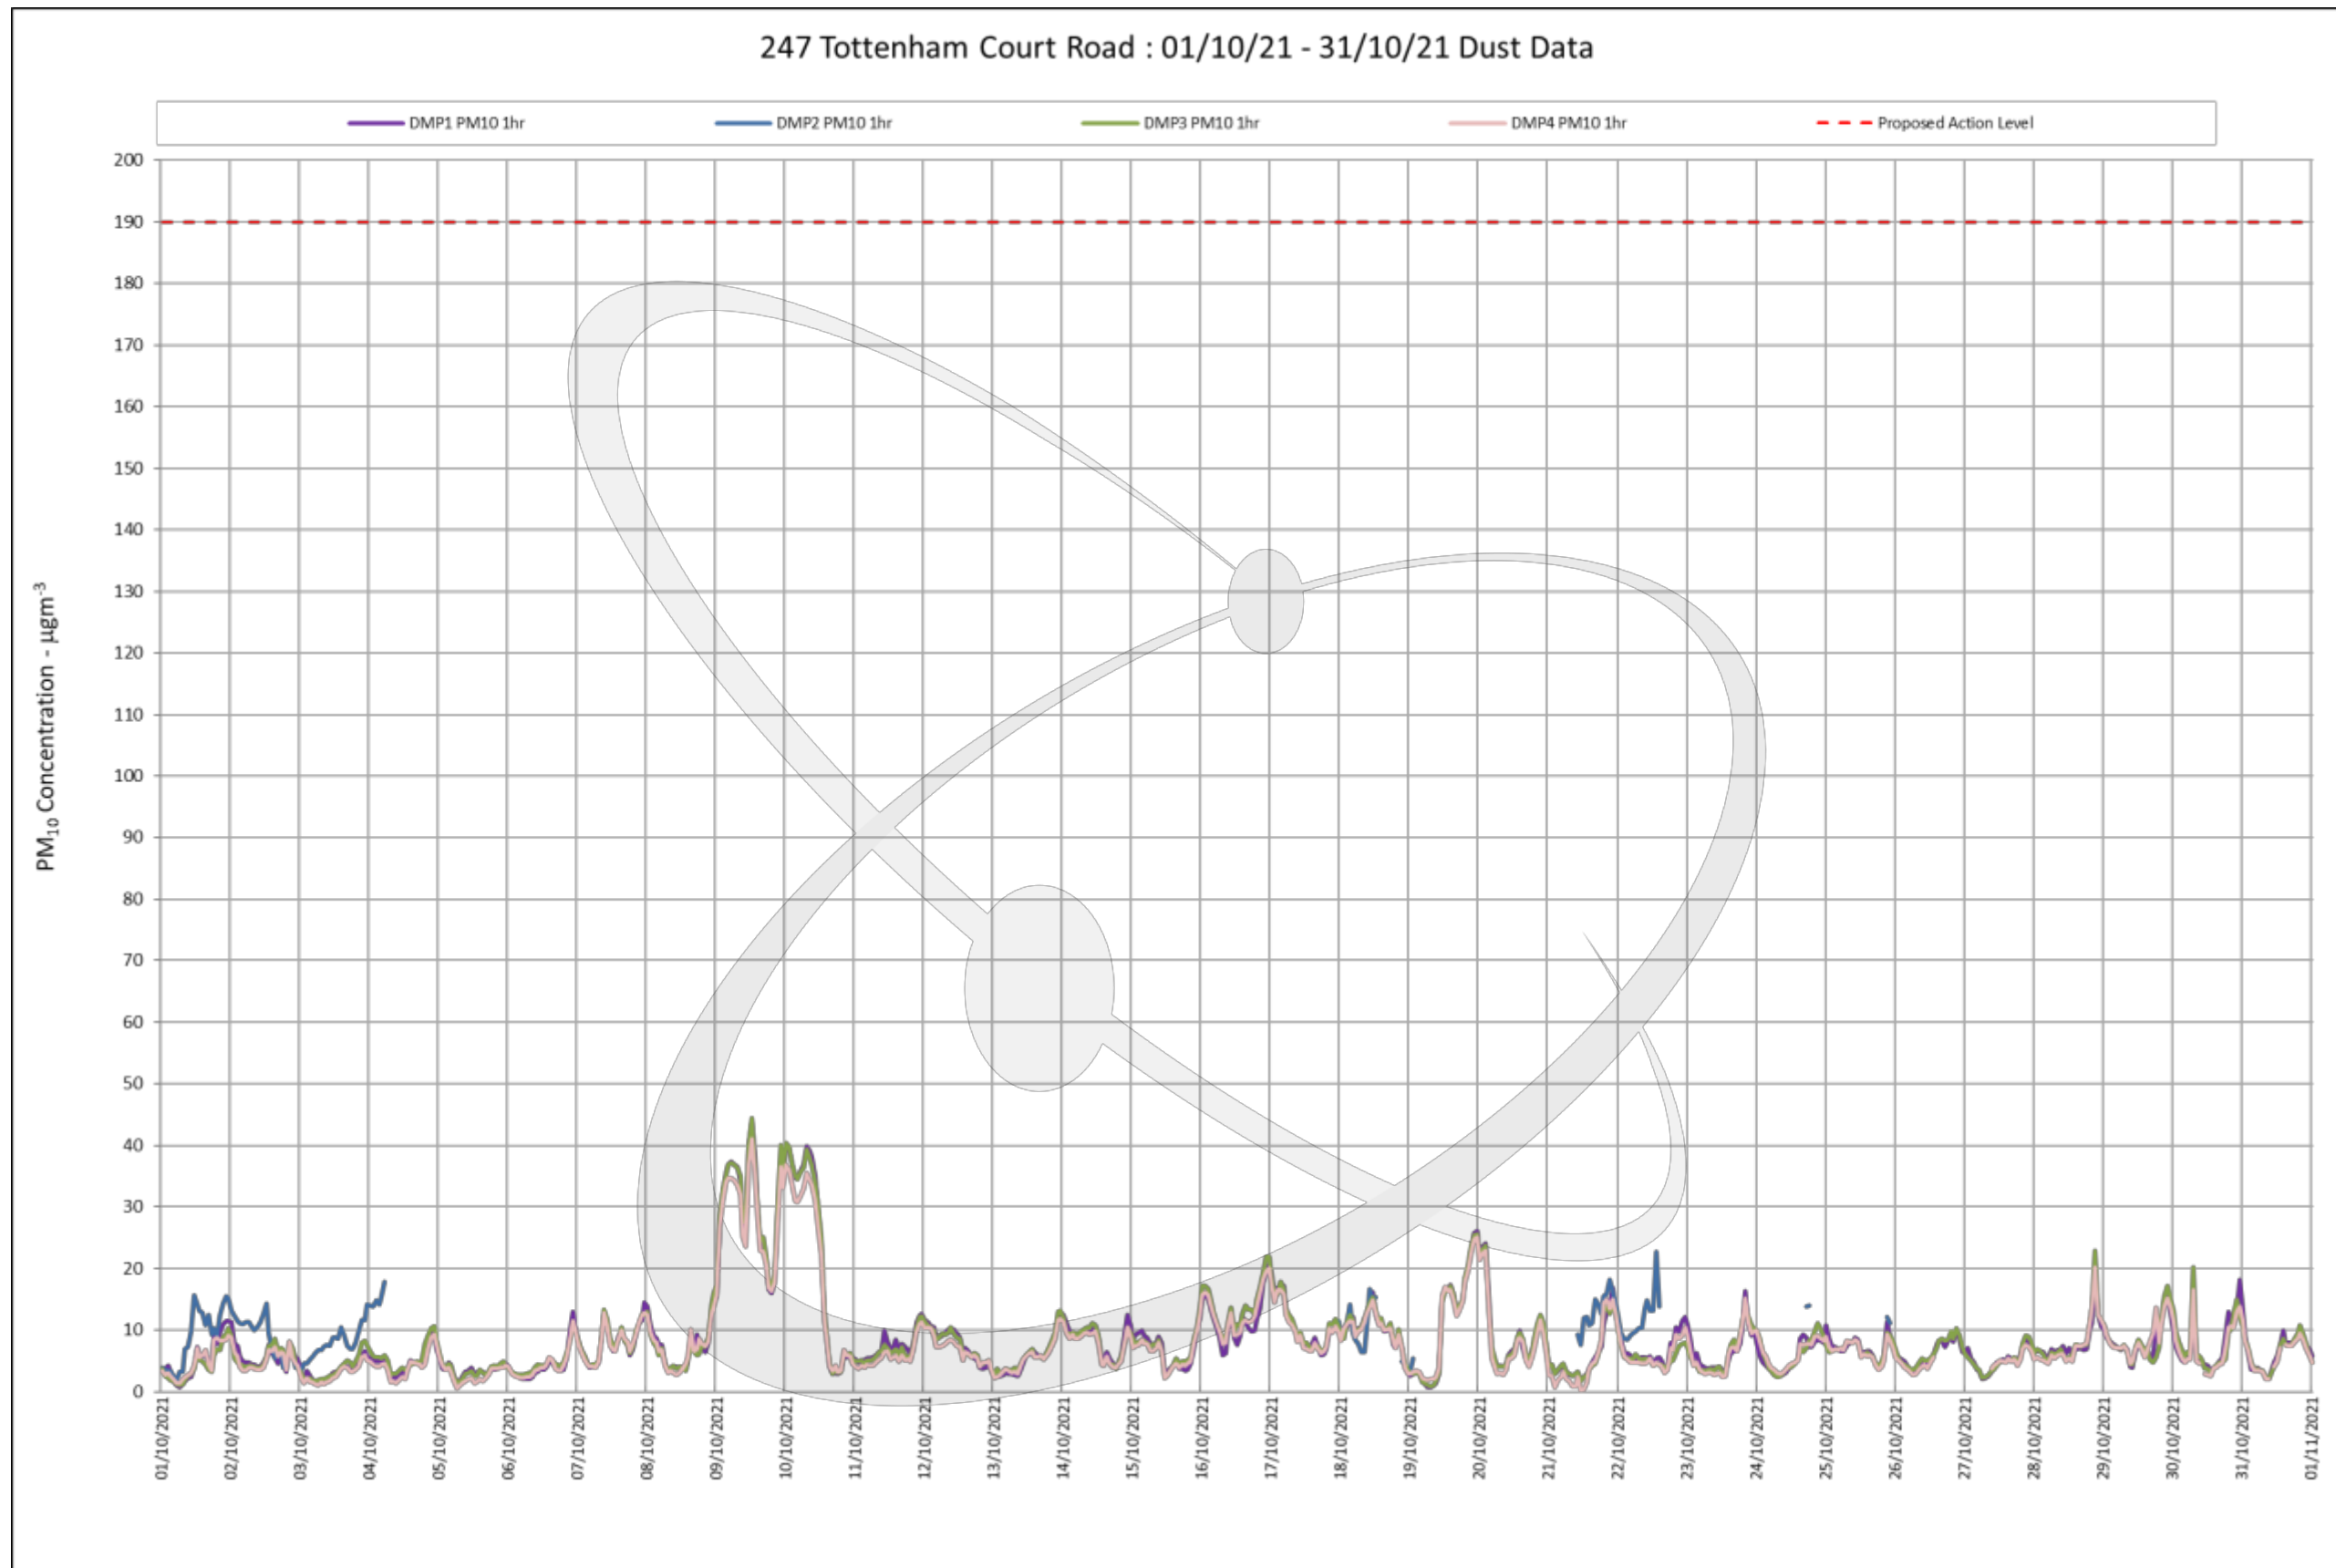

Please note, tabulated mean average data in 15-min and 1-hour values is provided separately as Appendix 2.

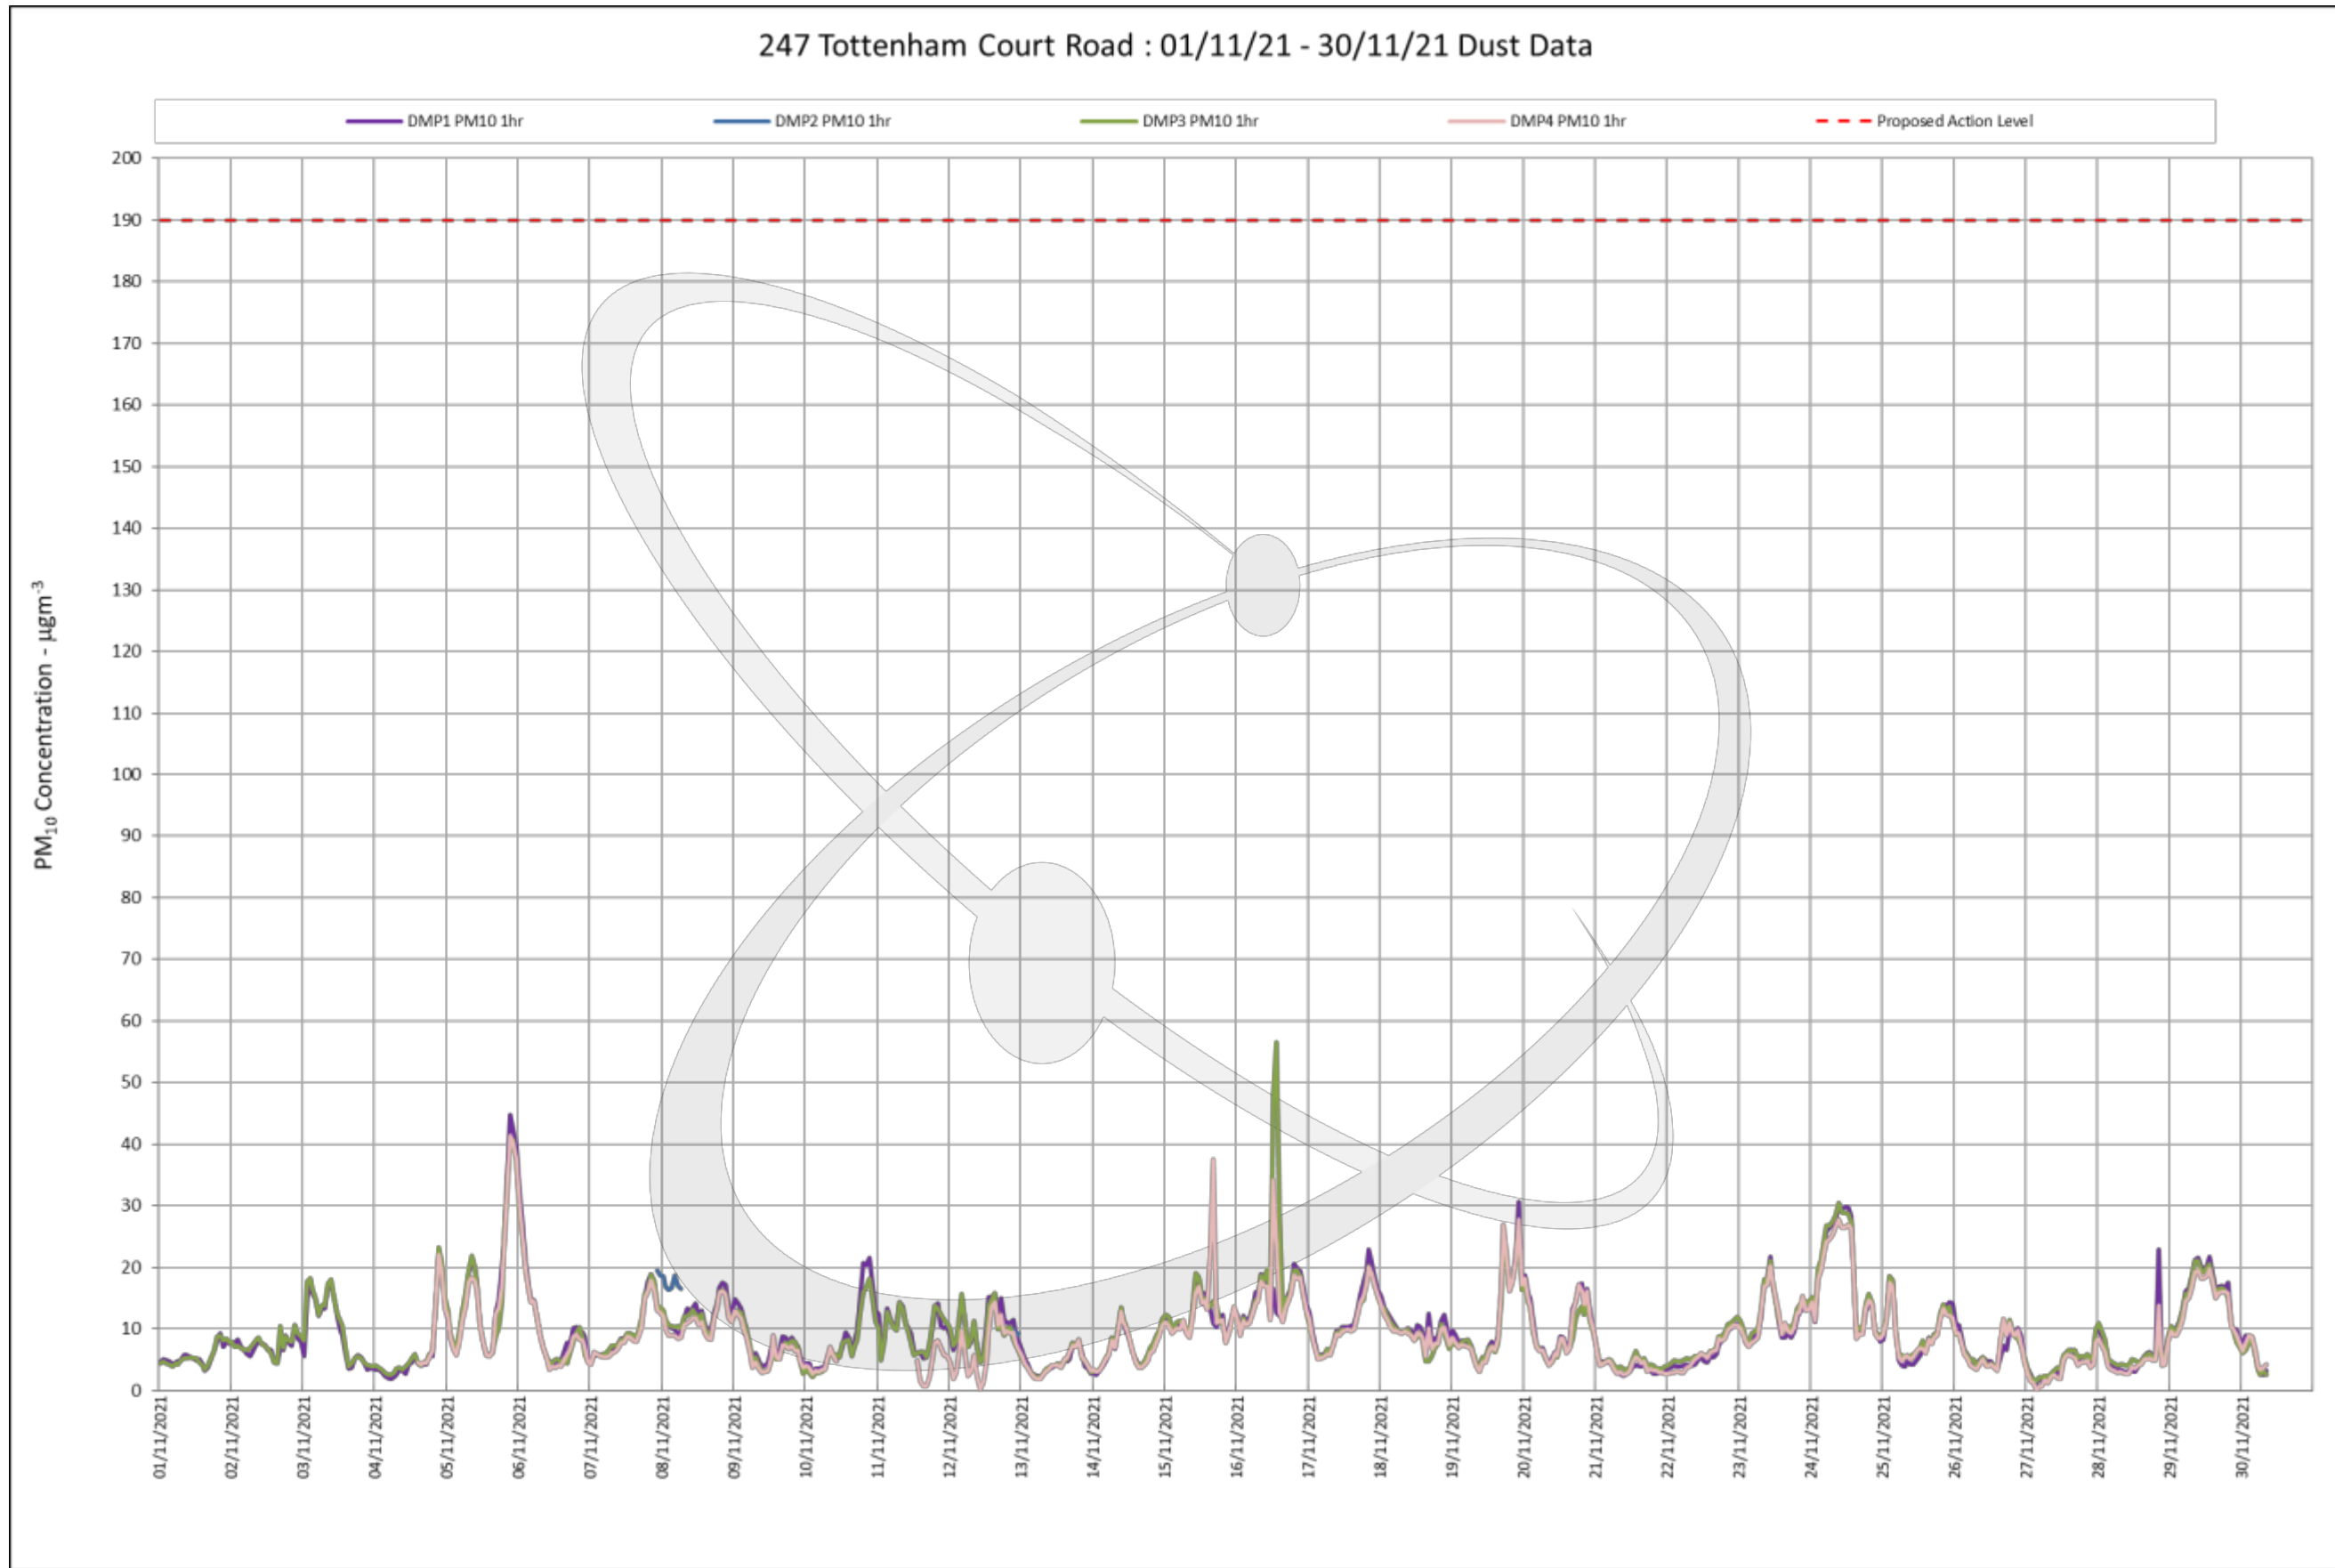

DMP2 experienced intermittent measurement data during this baseline period, the cause for which is not known, and DMP4 experienced a gap in measurement data from 1<sup>st</sup> to 4<sup>th</sup> November 2021.

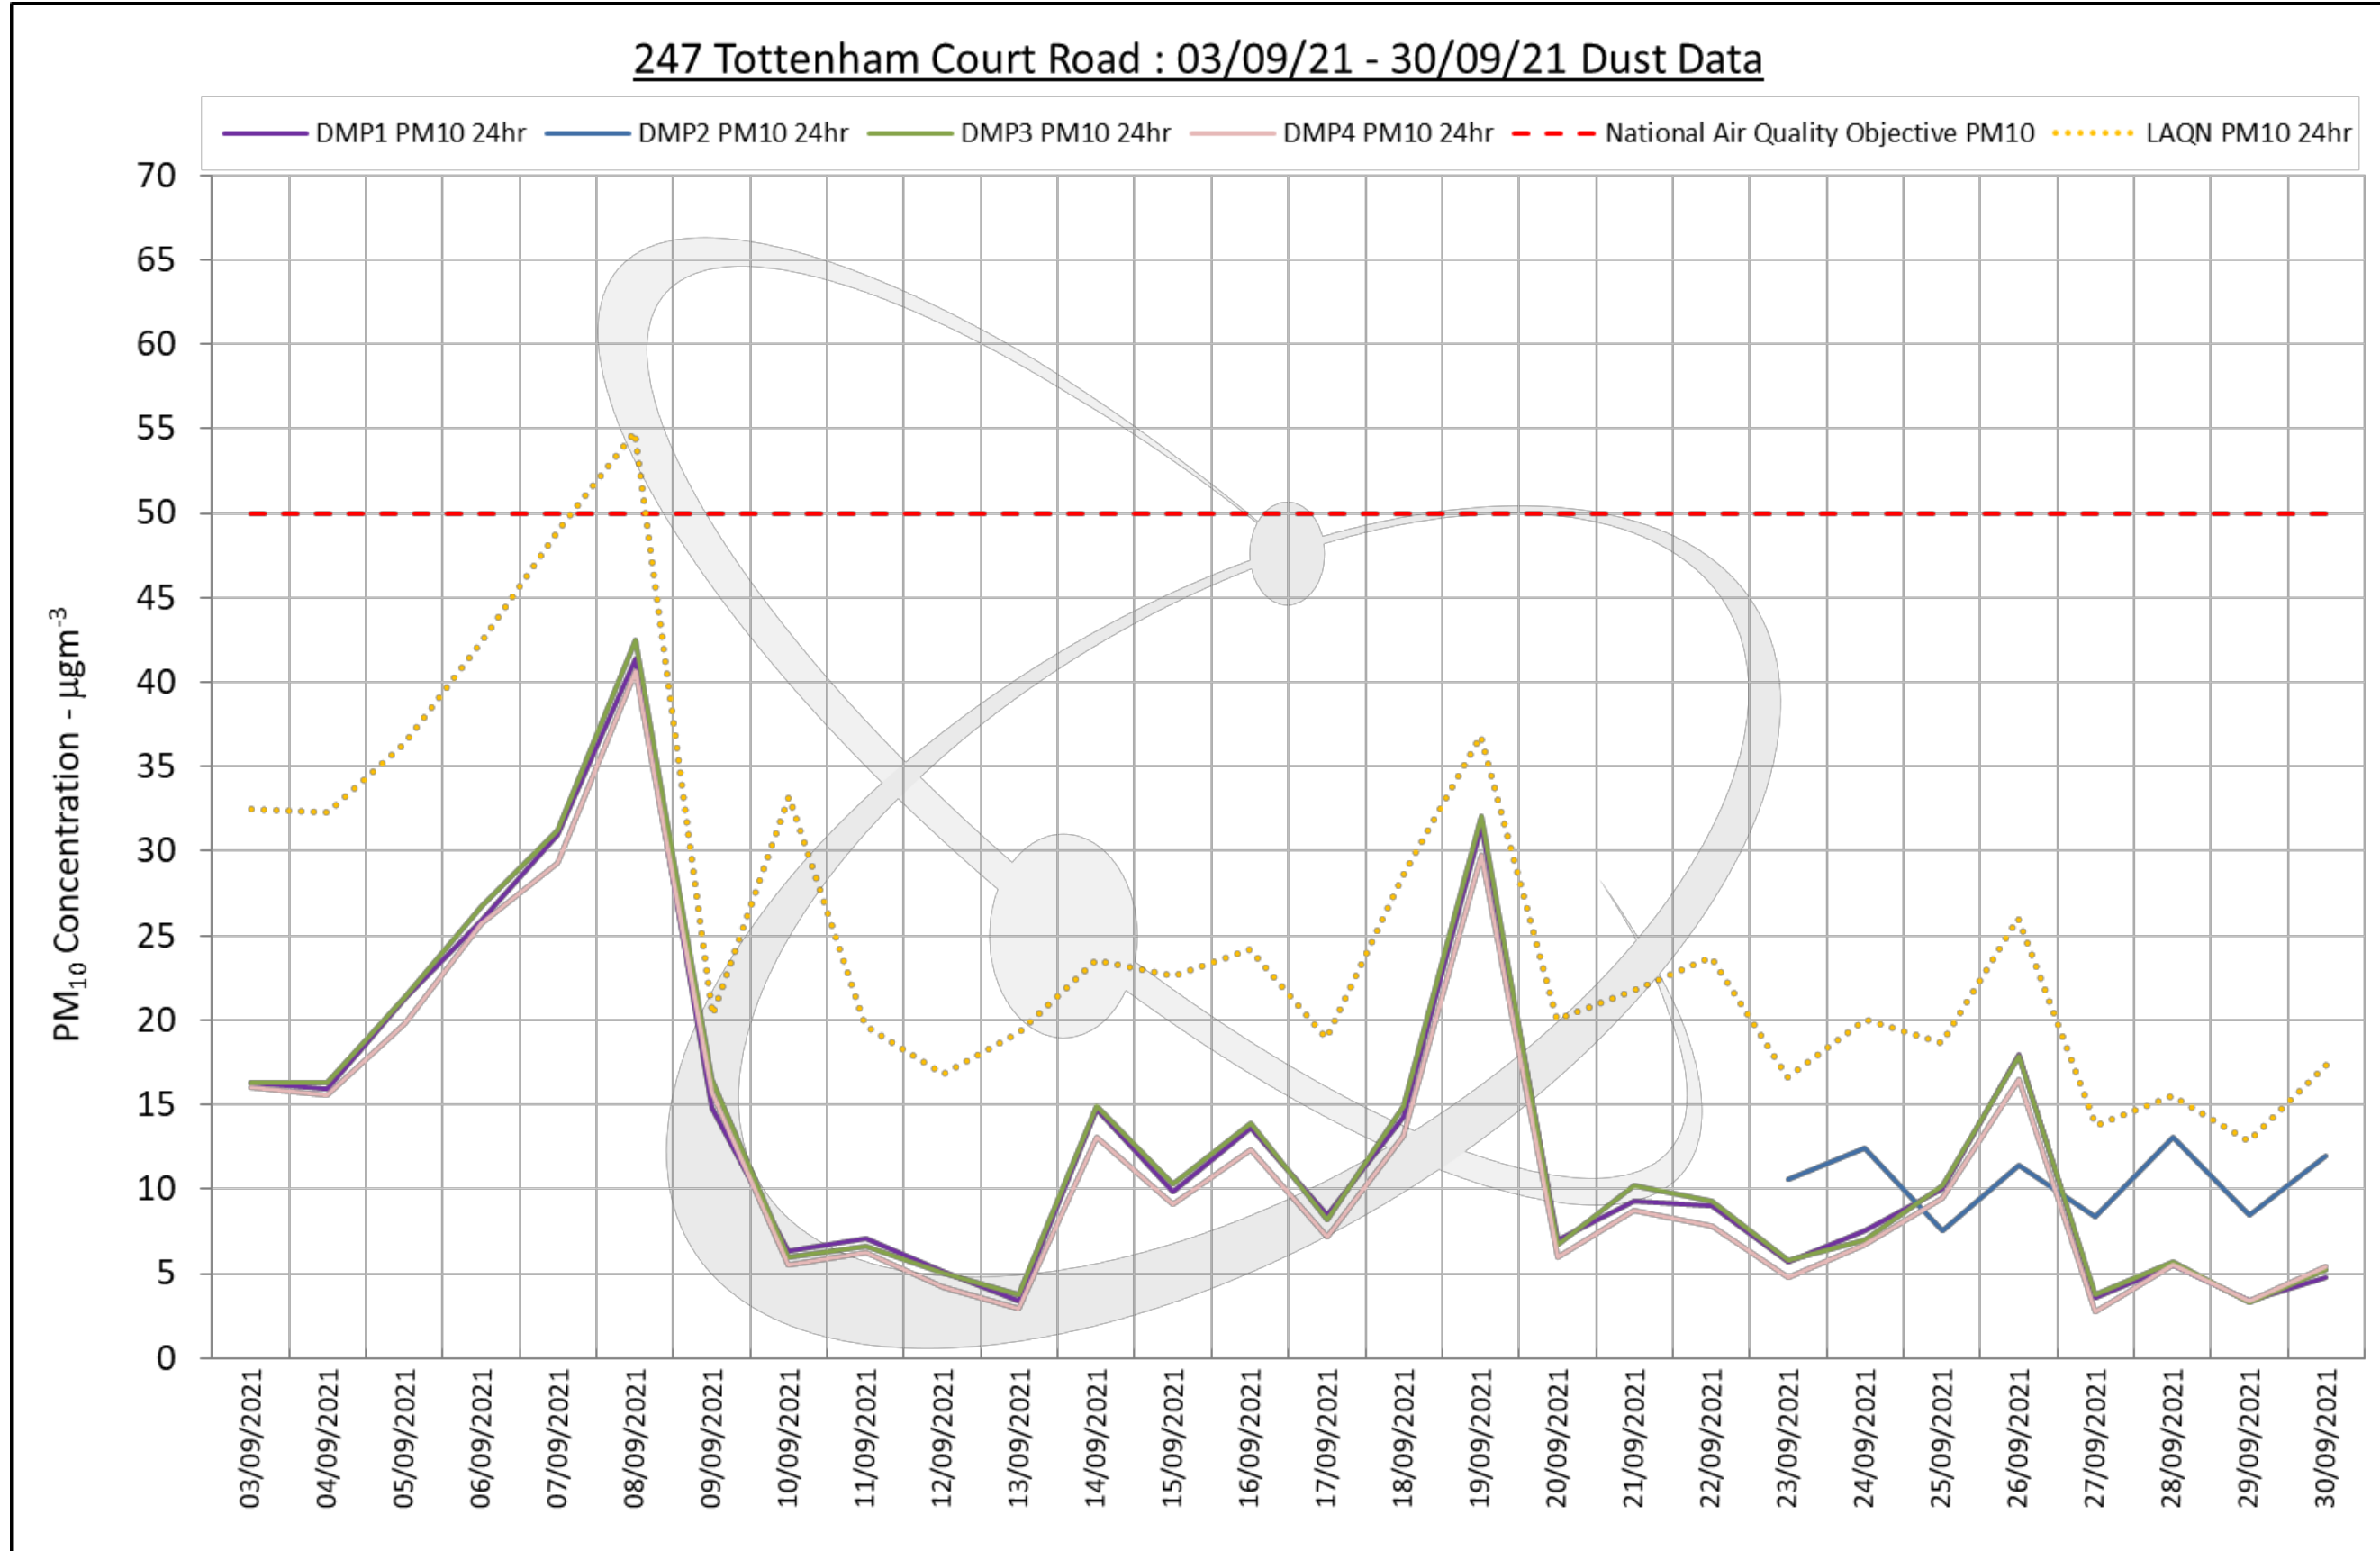

5. Dust (PM<sub>10</sub>) Monitoring Graphs—1-hour data

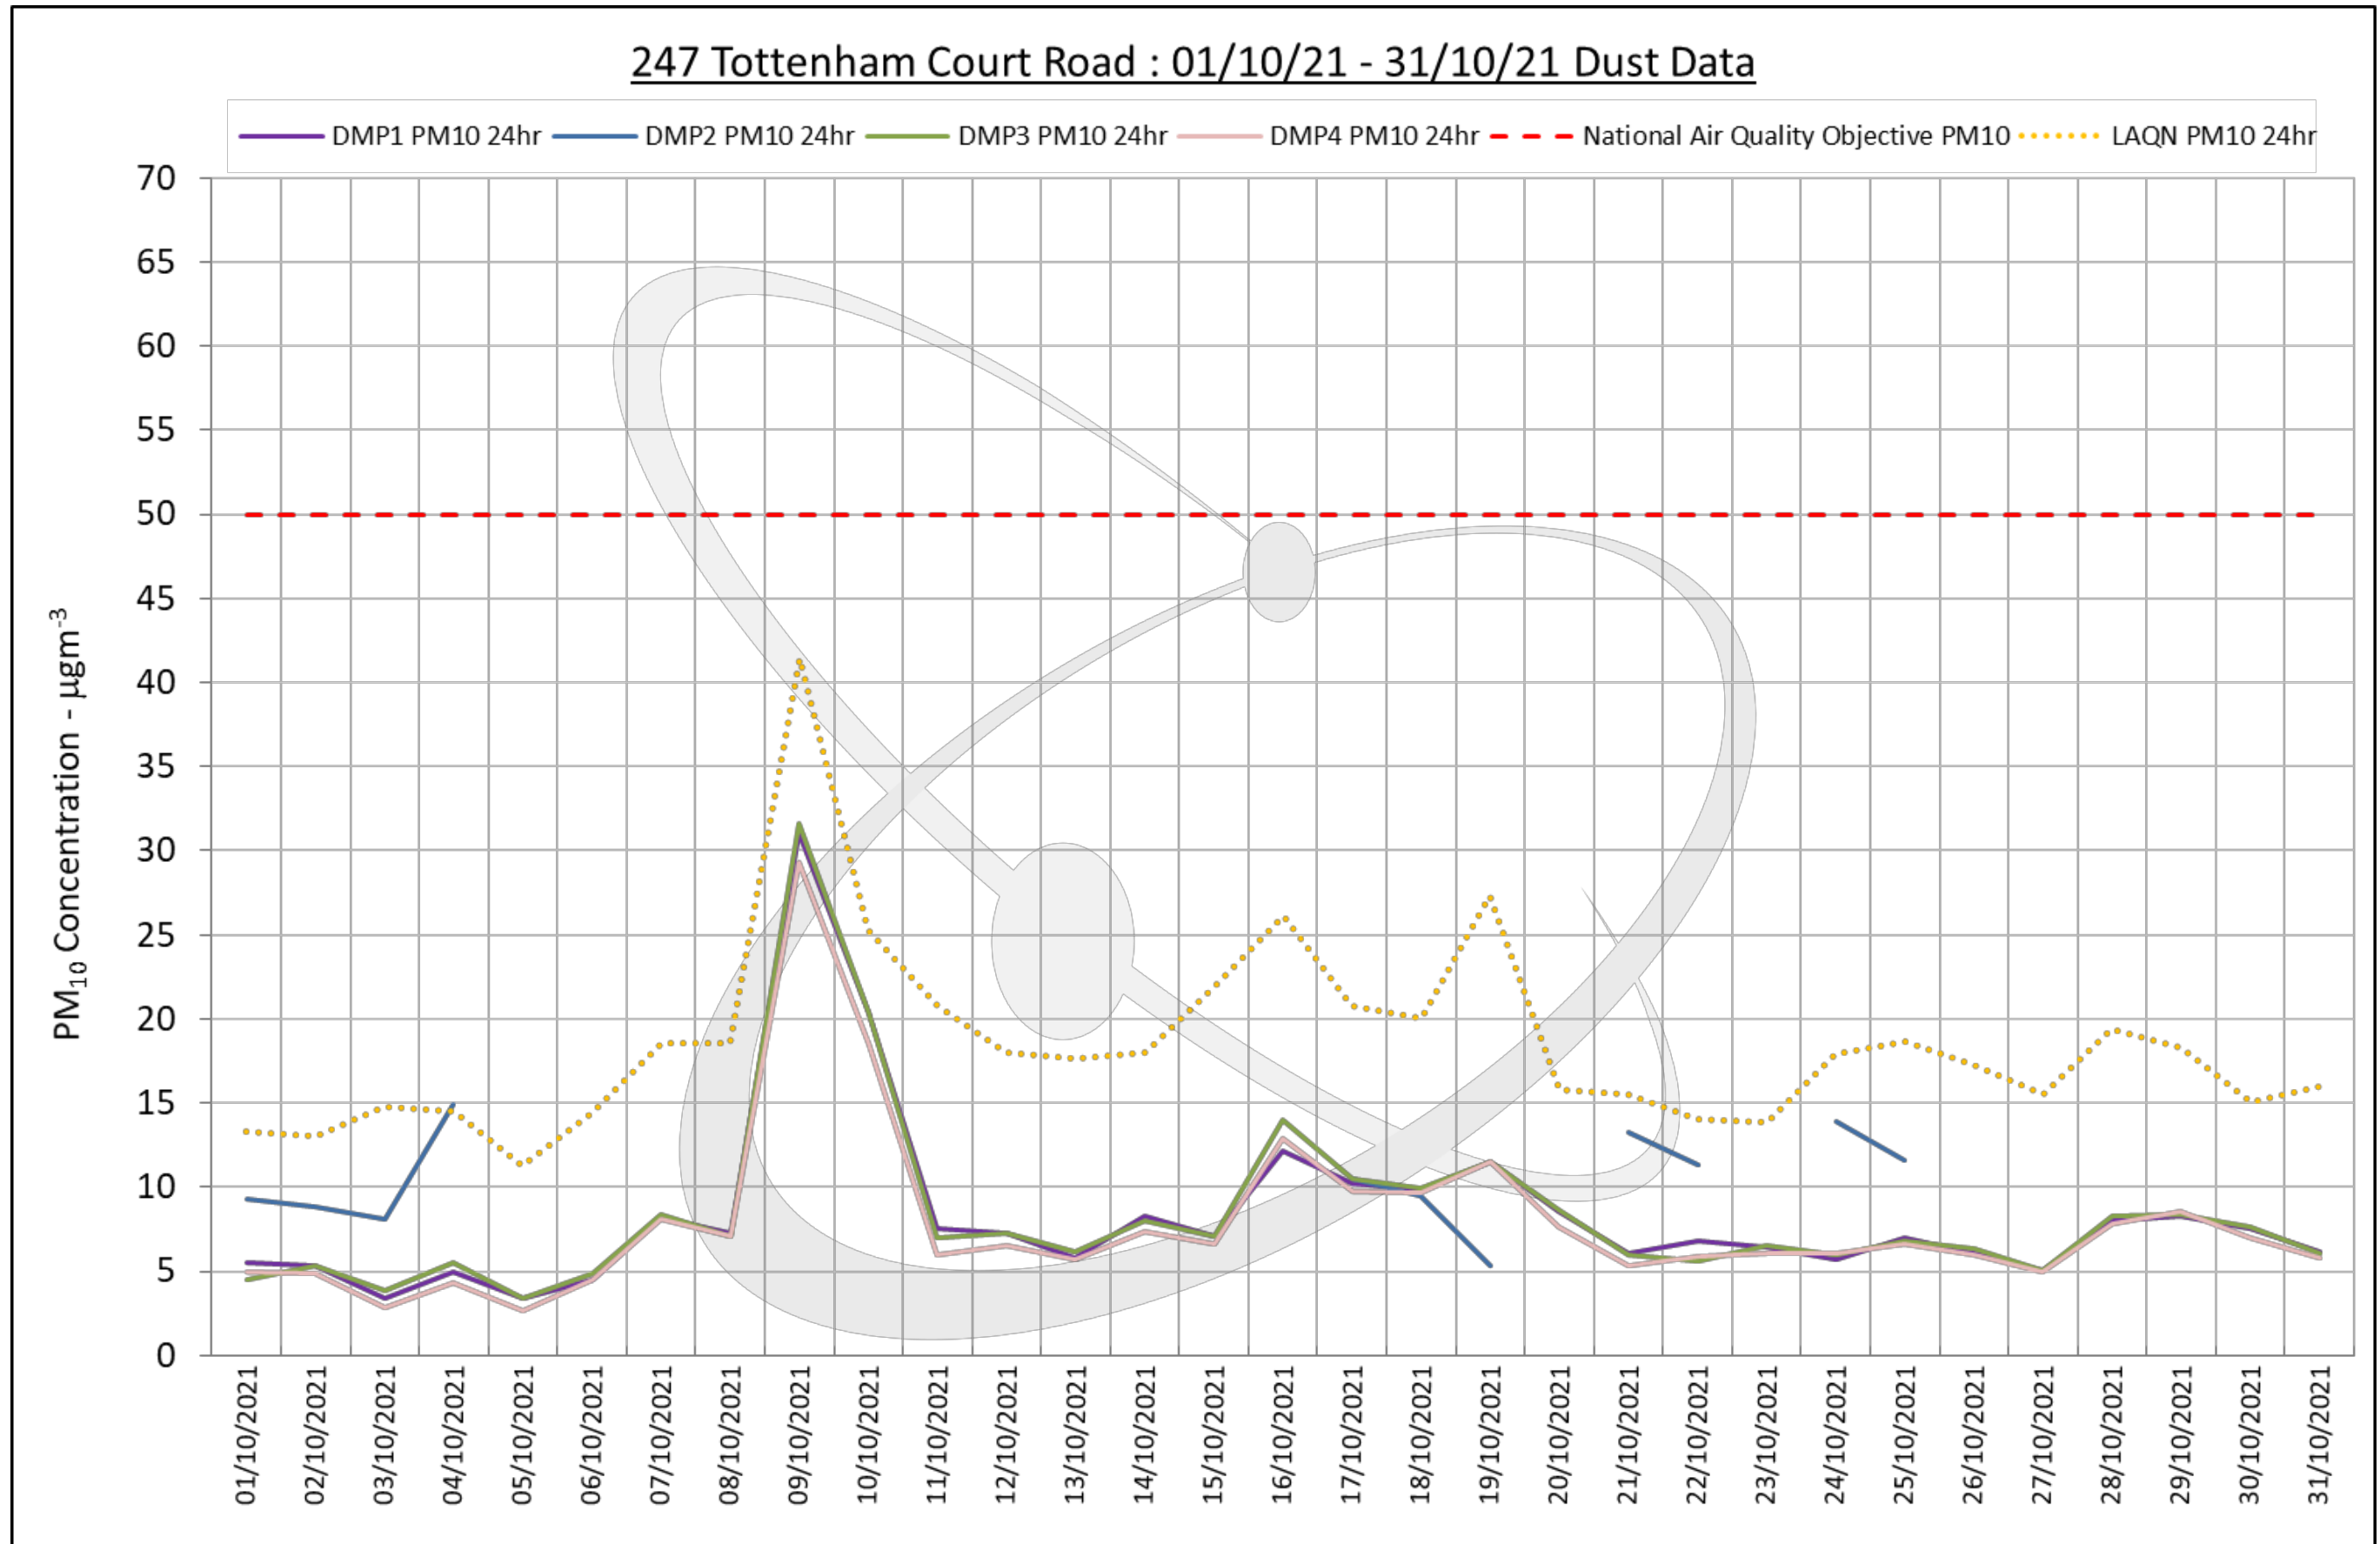

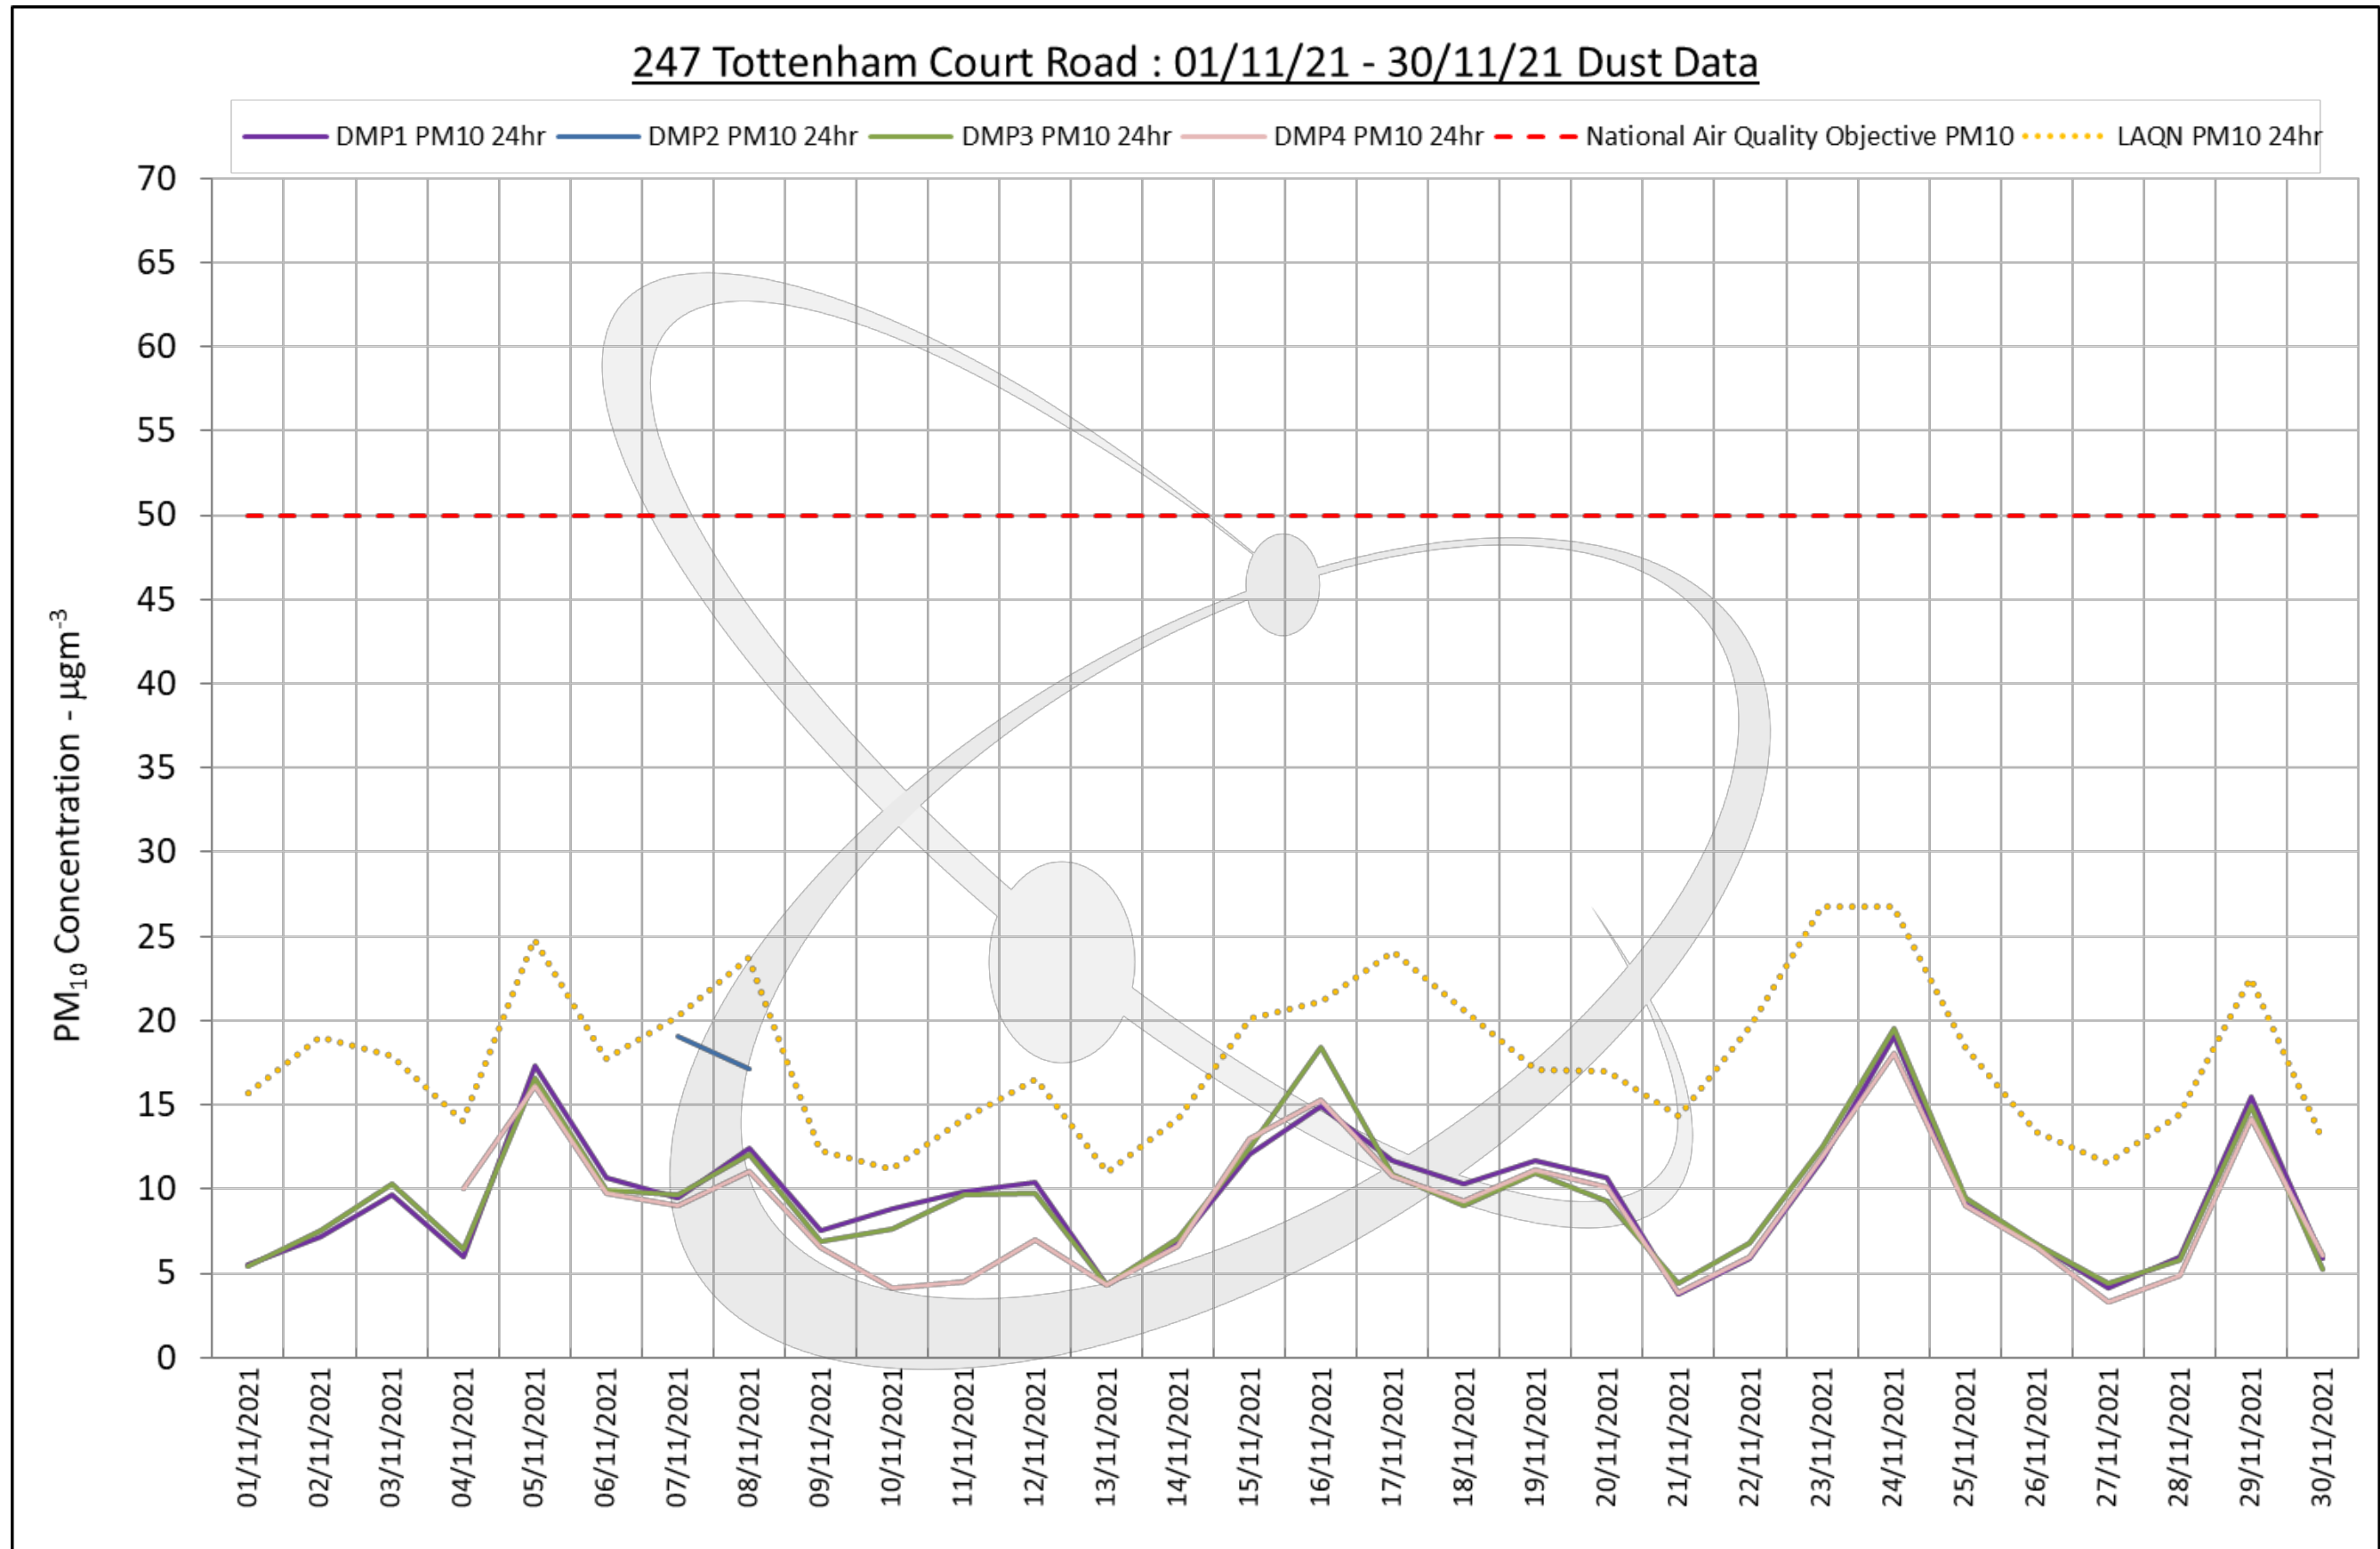

6. Dust (PM<sub>10</sub>) Monitoring Graphs – 24-hour data

## 7. Summary of Air Quality (PM<sub>10</sub>) – 24 Hour Average

A summary of measurement data at DMP1, DMP2, DMP3 and DMP4, shown as 24-hour average values, is provided in Table 2. Where “-” is shown this denotes no data available. Please note, tabulated mean average data in 15-min and 1-hour values is provided separately as Appendix 2.

| Date       | 24-hour average PM <sub>10</sub> concentration (µg/m <sup>3</sup> ) |      |      |      | Data capture (%) |      |      |      |
|------------|---|------|------|------|------------------|------|------|------|
|            | DMP1  | DMP2 | DMP3 | DMP4 | DMP1             | DMP2 | DMP3 | DMP4 |

**Table 2 – Summary of 24-hour averages and data capture rates**

## 8. Discussion

Unattended Air Quality (PM<sub>10</sub>) monitoring has been undertaken at the 247 Tottenham Court Road project, to provide baseline measurements of PM<sub>10</sub> Concentrations prior to commencement of demolition and construction work on site.

During the baseline monitoring period soft strip, asbestos removal and scaffolding erection works have been undertaken on the project. Works undertaken are unlikely to have had an effect on measured baseline concentration.

The proposed PM<sub>10</sub> trigger and action levels are set out in Section 2 of this report and are reproduced below:

- Trigger Level: 150 micrograms/m<sup>3</sup> (190µg/m<sup>3</sup>) as a 15-minute mean;
- Action Level: 250 micrograms/m<sup>3</sup> (250µg/m<sup>3</sup>) as a 15-minute mean;
- Action Level: 190 micrograms/m<sup>3</sup> (190µg/m<sup>3</sup>) as a 1-hour mean.

This report presents the measured and recorded Air Quality (PM<sub>10</sub>) concentrations measured and recorded at monitoring positions DMP1, DMP2, DMP3 and DMP4 from 03 September 2021 to 30 November 2021. The data provides the baseline PM<sub>10</sub> levels at each location.

Measured concentrations on site have been compared to those measured at nearby London Air Quality Network (LAQN<sup>1</sup>) monitoring sites. The nearest LAQN measurement location to the 247 Tottenham Court Road project is *London Bloomsbury* located approximately 170m to the north-east of the site. Daily mean data from the London Bloomsbury site is shown graphically in Section 6. Data measured on site generally follows the same trend as the data measured at the London Bloomsbury monitoring location, however the measured data on site is lower than the data measured at the LAQN site. The LAQN data is noted to be provisional pending approval by Imperial College.

Monthly mean data from September to November has also been compared to the monthly mean concentrations for these months from 2019 and 2021 at the London Bloomsbury site. A comparison of the mean daily (24 hour) measured PM<sub>10</sub> concentrations are shown in Table 3 below. It can be observed that measured concentrations on site are below those recorded at the London Bloomsbury site during 2021. The 2019 concentrations have been included, as concentrations during 2020 were impacted by the Covid-19 Pandemic.

| Period         | Site Name  | Type             | Period mean PM <sub>10</sub> concentration (µg/m <sup>3</sup> ) |
|----------------|--|------------------|---|
| September 2021 | 247 Tottenham Court Road (Site)<br><i>Note this is the period average of DMP1-DMP4</i> | Urban Background | 12.3  |
| October 2021   |  |                  | 8.7   |
| November 2021  |  |                  | 10.8  |
| September 2019 | Camden – London Bloomsbury   | Urban Background | 12.6  |
| October 2019   |  |                  | 14.0  |
| November 2019  |  |                  | 16.7  |
| September 2021 |  |                  | 25.6  |
| October 2021   |  |                  | 18.5  |
| November 2021  |  |                  | 17.8  |

**Table 3 – Comparison of measured concentrations**

---

### 8.1. Monitoring Summary

DMP2 experienced intermittent measurement data during this baseline period, the cause for these gaps is unknown.

DMP4 experienced a gap in measurement data from 1<sup>st</sup> to 4<sup>th</sup> November 2021 and intermittent data from 10<sup>th</sup> to 12<sup>th</sup> November 2021.

It is noted that the proposed Trigger and Action Levels were not exceeded by any monitor during this baseline monitoring period.

---

### 8.2. DMP1 Summary

Baseline levels during this measurement period were consistently well below the 190 µg/m<sup>3</sup> (1-hour mean concentrations) or the 250 µg/m<sup>3</sup> (15-minute mean concentrations) Action Levels and the 150 µg/m<sup>3</sup> (15-minute mean concentrations) Trigger Level. The period mean PM<sub>10</sub> result at this monitoring location was 10.2 µg/m<sup>3</sup>.

---

### 8.3. DMP2 Summary

This monitor was installed after DMP1, DMP3 & DMP4 on 23<sup>rd</sup> September 2021.

Baseline levels during this measurement period were consistently well below the 190 µg/m<sup>3</sup> (1-hour mean concentrations) or the 250 µg/m<sup>3</sup> (15-minute mean concentrations) Action Levels and the 150 µg/m<sup>3</sup> (15-minute mean concentrations) Trigger Level. The period mean PM<sub>10</sub> result at this monitoring location was 12.1 µg/m<sup>3</sup>. However, these results should be treated with an element of caution as data capture rates at this position were very low.

---

### 8.4. DMP3 Summary

Baseline levels during this measurement period were consistently well below the 190 µg/m<sup>3</sup> (1-hour mean concentrations) or the 250 µg/m<sup>3</sup> (15-minute mean concentrations) Action Levels and the 150 µg/m<sup>3</sup> (15-minute mean concentrations) Trigger Level. The period mean PM<sub>10</sub> result at this monitoring location was 10.4 µg/m<sup>3</sup>.

---

### 8.5. DMP4 Summary

Baseline levels during this measurement period were consistently well below the 190 µg/m<sup>3</sup> (1-hour mean concentrations) or the 250 µg/m<sup>3</sup> (15-minute mean concentrations) Action Levels and the 150 µg/m<sup>3</sup> (15-minute mean concentrations) Trigger Level. The period mean PM<sub>10</sub> result at this monitoring location was 9.7 µg/m<sup>3</sup>.
